

ABSTRACT OF THE DISCLOSURE

A washing machine has a partial washing apparatus, which has a supersonic resonator, which is driven by an oscillator to generate supersonic vibration and a supersonic vibration horn. A washing liquid is fed to the partial washing apparatus so as to be agitated by supersonic waves, which are then fed to an article to be washed to achieve partial washing of the article. The partial washing apparatus is detachably fitted to the washing machine proper at approximately the center of a lid of the washing machine proper. The partial washing apparatus may be used as a handy-type partial washing apparatus when held at a grip portion of the partial washing apparatus.
